

WE ARE

Remote monitoring after treatment for prostate cancer for patients at Worthing hospital

Patient information

What is a remote monitoring programme?

Your clinician has decided to put you on to the remote monitoring programme. This has been specially designed to support you whilst on follow up for your prostate cancer.

Close monitoring will involve 6 monthly PSA blood tests and the expectation that you complete a short symptom questionnaire. Routine outpatient follow up appointments will not be carried out. However, you may be asked to attend an appointment at any time during your follow up period to discuss any results or symptoms you are experiencing. We will contact you with your results or if you need an appointment.

Will I still speak to my specialist doctor or nurse?

Please be assured that you will still have access to support when and if you need it. The urology follow-up co-ordinator works closely with your consultant and specialist nurse team and will be available to offer information and support over the phone and will escalate your concerns. If your specialist team feels that you should be seen because of any symptoms you are experiencing, we will organise an appointment for you.

How long does remote monitoring last?

Every patient is different so we can't specify how long our remote monitoring programme will last. This will depend on your initial diagnosis as well as the type of treatment you received. Specific information about your follow up will be included in your last clinic letter.

How often will I be contacted?

You will be required to have six monthly PSA blood tests and to fill in the symptom questionnaire so that we can monitor any symptoms you may be experiencing. We will write to you with your results. If you have any concerns in between your blood tests you can contact us.

How will I know if my cancer comes back?

We will be monitoring your PSA blood tests on a six monthly basis. The first signs of prostate cancer recurrence are noticed from blood tests alone. There are specific criteria regarding your PSA levels which will trigger an appointment with the clinical team.

Who do I talk to if I am worried about my PSA blood results?

Please contact the urology follow up coordinator in the first instance. Email uhsussex.wor.urofollowupcoordinator@nhs.net Phone 01903 205111 Ext. 86685

Will I need another scan?

You will likely only need a scan if your PSA begins to rise, or you alert us to any symptoms which we are concerned about.

If I call the follow up coordinator will you answer the phone?

We try to answer calls during working hours. However, if we are not able to, we ask that you leave a clear message on the answer phone. Please leave the following information;

- Your full name and date of birth.
- Your hospital ID number, and / or your NHS number.
- A telephone number which we can contact you on during working hours.

This is not an emergency service, but we will try to contact you within 2 working days of your query. If you feel unwell or need urgent help you should call your GP, **111 or 999** for assistance.

What if I am worried about symptoms?

Whilst under the care of the remote monitoring service, you will still have access to the uro-oncology clinical nurse specialist team. They can be contacted either by emailing

uhsussex.macurology@nhs.net or by telephoning 01903 205111 Ext 84716.
